New Type III

Note:

- ▶ Some of the pics in this presentation are of the other type 3 since the layout of the truck is the same.

Objectives

- ▶ Review vehicle specifications
- ▶ Safety Considerations
- ▶ Compartment setup

WARNING

Vehicle Ht:

9' 7"

Gross Vehicle
Weight Rating:

Vehicle Lg:

27' 4"

17.5 TON

Vehicle designed to carry max. 4 personnel.

As manufactured; vehicle owner must revise label for any vehicle height changes

Vehicle Specifications

- ▶ 2018 International chassis with Cummins L9 380 horse inline 6 cylinder turbo diesel engine
- ▶ Rosenbauer high/low pressure 750 gpm pump with 500 gallon tank

Pressures

- ▶ 28 psi operating pressure at low idle
- ▶ 55 psi operating pressure at high idle
- ▶ 700 rpm at idle

Fluids

This truck uses DEF fluid

Safety Considerations

- ▶ Vehicle goes very fast, do not exceed speed limit
- ▶ Vehicle is very tall (9'7"), be careful where you drive it
- ▶ Although it is 4 wheel drive do not take into sketchy locations
- ▶ The monitor is high pressure/foam
- ▶ Hose reels are high or low pressure with foam
- ▶ Be careful climbing up and down the ladder

Pumping

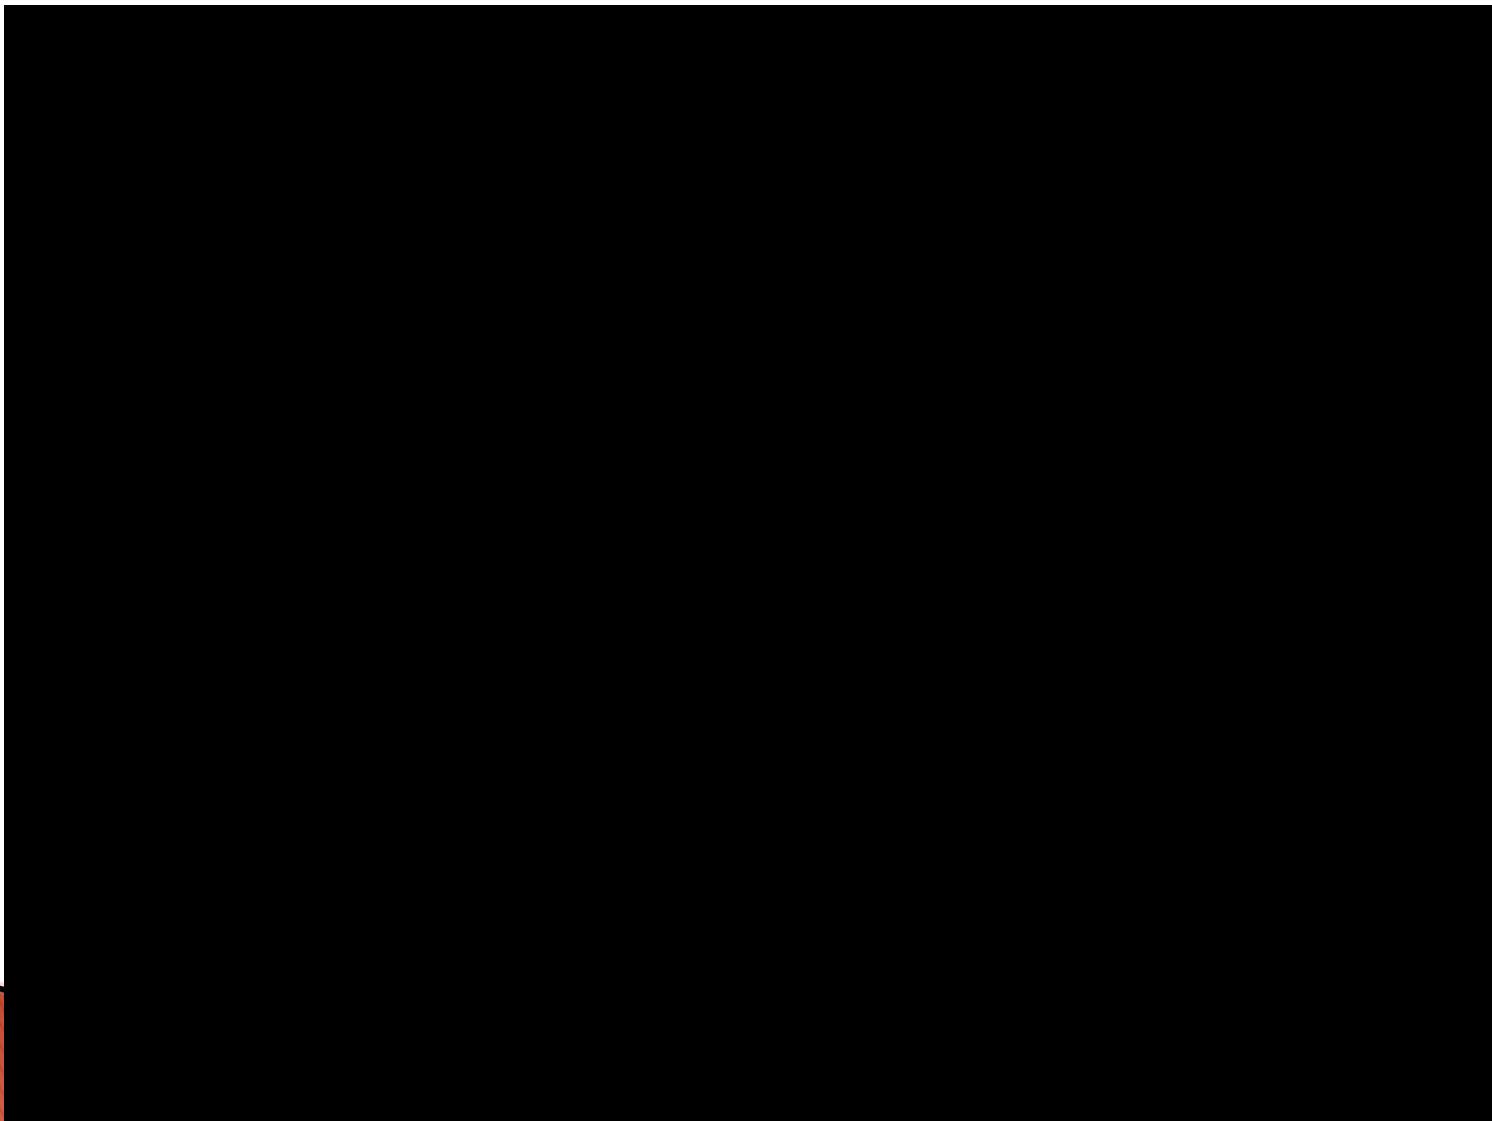

Auto priming

Nozzles on the booster reels

Front Monitor attachment

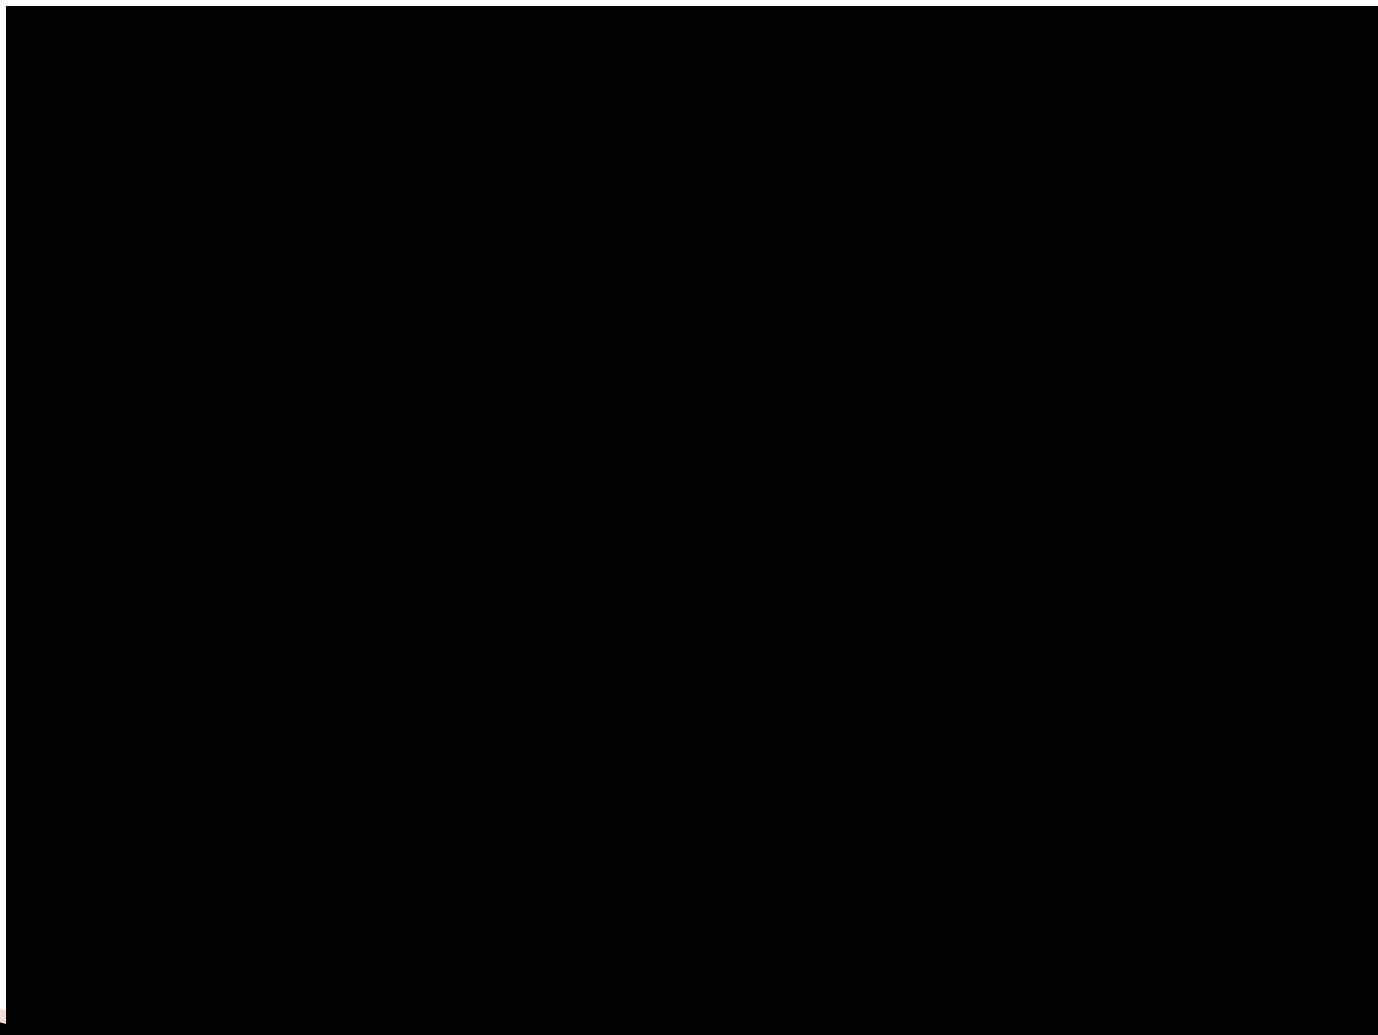

- ▶ Align the coupling on the bumper with the monitor
- ▶ Snap the monitor to the discharge
- ▶ Attach the electrical connection

4 wheel drive procedure

- ▶ Set the parking brake
- ▶ Put in Neutral
- ▶ Engage front axle with toggle switch
- ▶ Select high or low range
- ▶ Low range will give higher pressure for pumping
- ▶ Can pump and roll
- ▶ to disengage follow the same instructions, set brake, neutral, turn off front axle, go back to high gear

4 wheel drive procedure

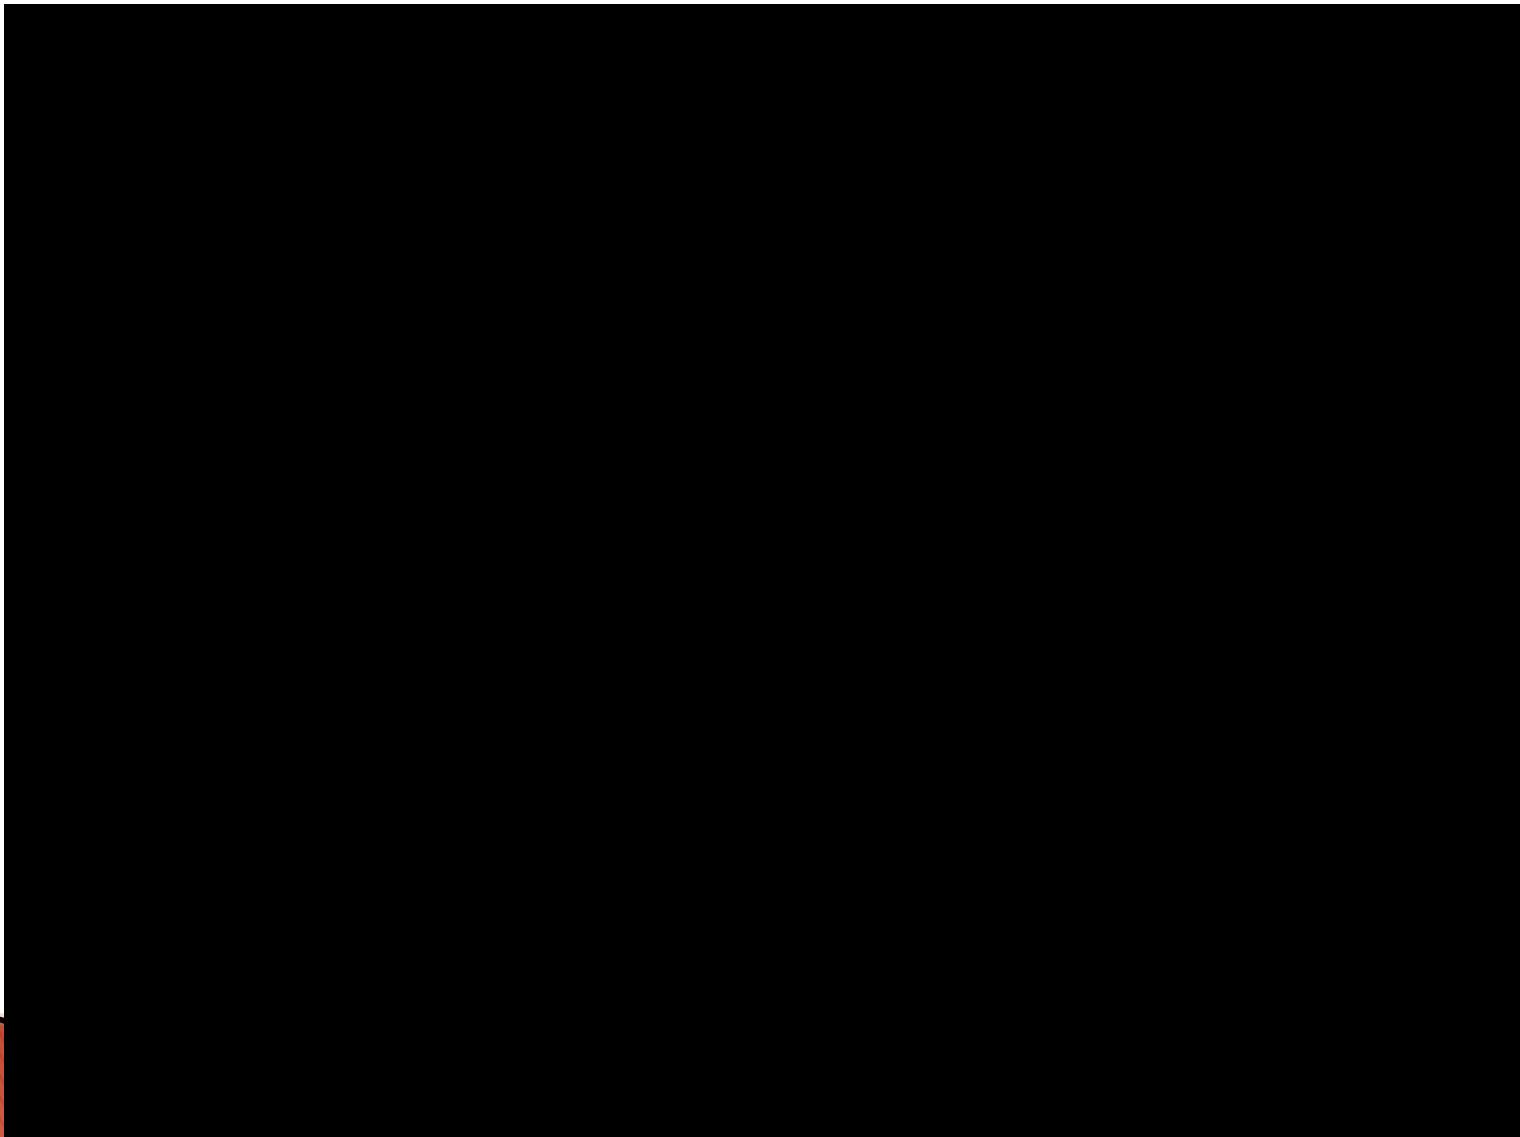

High pressure foam

- ▶ Open tank to pump –Note there is a tank to pump valve both in the cab and on the pump panel to open/close the tank to pump valve
- ▶ Use switch to engage pump –Note there is a switch in the cab and on the pump panel to engage/disengage the pump
- ▶ Turn on high pressure switch
- ▶ Turn on high pressure foam switch

High Pressure Foam

- ▶ Will only create foam at pressures >250 psi
- ▶ Insufficient pressure will not educt foam
- ▶ Is not a field adjustable percentage (constant)
- ▶ On the front monitor keep the adjustable nozzle at a lower gpm (30) to get a good pressure and good foam
- ▶ The side reels are plumbed with high pressure foam and low pressure foam.
- ▶ The monitor is high pressure foam only

Operation

2010 Federal Emissions Label

Level	Indication	Audible Alarm	LCD Text Message	Vehicle Conditions/Operation	Action Required
1	 DPF 3813052 (Solid)	None	Scrolls between See Visor for info and Parked Regen Required.	Exhaust filter regeneration required.	Drive on highway at highway speeds or start Parked Regeneration to prevent loss of power.
2	 DPF 3813052 (Flashing)	None	Scrolls between See Visor for info and Parked Regen Required.	Exhaust filter is full.	Pull vehicle safely off roadway and start Parked Regeneration to prevent loss of engine power.
3	 DPF 3813052 (Flashing)	An alarm will beep continuously while ignition is on.	Scrolls between See Visor for info and Parked Regen Required.	Exhaust filter is full. Engine performance is LIMITED.	 WARNING Pull vehicle safely off roadway and start Parked Regeneration to prevent engine stopping.

Exhaust System Temperature is HOT

WARNING

Exhaust components are operating under normal conditions and exhaust gases are at extremely high temperatures.
When stationary, keep away from people and flammable materials, vapors, or structures or **STOP ENGINE.**

A serious problem has occurred. Engine may **SHUTDOWN** soon. Pull vehicle safely off roadway, turn on flashers, set parking brake,
place warning devices, and **STOP ENGINE.** Seek service immediately.

Regen instructions 2

Parked Regeneration Procedure

Perform the following steps to initiate Parked Regeneration (cleaning) of the exhaust filter:

1. Park the vehicle safely off the roadway and away from flammable materials.
2. Before initiating parked regeneration (using the ON/PARKD REGEN switch), the following conditions must be in place:
 - a. Parking brake must be set.
 - b. DPF indicator illuminated (Solid or Flashing).
 - c. Transmission must be in Neutral (N) or Park (P), if available.
 - d. Accelerator, foot brake and clutch (if present) pedals must not be depressed.
 - e. Engine temperature must be at a sufficient level to allow regeneration.

With some engines, this may be as high as 76.6°C (170°F).

NOTE: The engine coolant temperature must be above 76.6°C (170°F) before the parked regeneration procedure can be performed. If the engine coolant temperature is too low, the parked regeneration procedure will not activate.

3. Press the ON position of the ON/PARKD REGEN switch to initiate the regeneration cycle.

The engine speed will automatically ramp up to a preset RPM, PARKD REGEN ACTIVE will be displayed in the

Operation

information display, and the switch indicator will illuminate when the cycle is started. If the indicator is blinking, check to be sure that all conditions in step 2 have been met. Once started, the regeneration cycle will last approximately 30 minutes.

NOTE: If any of the above conditions are altered during the Parked Regeneration process, regeneration will be halted, and must be restarted.

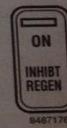

4. When the regeneration cycle is complete, the switch indicator will go off, the engine RPM will return to normal idle, and all exhaust filter warning indicators will be off. The vehicle may now be driven normally.

NOTE: In the event of an emergency situation where the vehicle must be moved after beginning Parked Regeneration, press PARKD REGEN position of the ON/PARKD REGEN switch to cancel Parked Regeneration.

Regeneration Inhibit Switch

The optional Regeneration Inhibit switch is used to prevent the normal regeneration or parked regeneration processes.

NOTE: There are two versions of the regeneration inhibit switch: the two-position and the three-position switch. Therefore, it's necessary to verify which version is installed in this vehicle. Both versions have the same switch labels.

Questions?

- ▶ You need to go drive the truck and operate the high pressure foam with the monitor and hose reels to get the feel of them
